## Numbers In The House

Invite your child to point out the different numbers they see around the house. Are there any numbers in the kitchen or in the bedroom? Can they find the numbers one through 10? Talk with them about the different numbers and what they mean, like how the numbers on a clock tell time.

[See what your child is learning](#)

### BRAINY BACKGROUND

Understanding that numbers are symbols and represent ideas, like time, is a concept that will take time for your child to learn. Talking about numbers with them helps build this understanding and shows them the importance of math in their everyday life.
